```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

New genomic sequences from Listeria species, useful for detection, treatment and prevention of infection, also related polypeptides, antibodies and modulators. Claim 16; SEQ ID NO 740; 180pp; French. The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or muteational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to secren for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agent), also for treating infections by Listeria, and are useful as immunogens in anti-Listeria vaccines. Note: The sequence data for this patent did not form

The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in antilisteria vaccines. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ffp.wipo.int/pub/published_pct_sequences. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     199

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to nucleic acid sequences (ABQ67188-ABQ71212) from Listeria sp. The sequences are useful as probes and primers for identification and/or detection of Listeria (e.g. as contaminants in foods, or mutational analysis) and for analysis of gene expression. Proteins encoded by the nucleic acid sequences can be used to screen for compounds that modulate gene expression, replication and pathogenicity of Listeria (potential therapeutic agents), also for treating infections by Listeria, and are useful as immunogens in anti-Listeria vaccines. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences. (Updated on 29-AUG-2003 to standardise OS field)

```
This DNA encodes the plasmid-derived type-II restriction- modification system from Lactococcus lactis subsp. cremoris W9, LlaB1, and contains 2 offse transcribed in the same direction and coding for putative proteins of 580 AA (LlaB1 methylase M.IlaB1, AAW02164) and 299 AA (LlaB1 endonuclease R.LlaB1, AAW02165). This restriction-modification system may be used in a method for conferring increased virus resistance, more specifically phage resistance, to a L. lactis strain used in cheese manufacture. (Updated on 16-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             110
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          170

Staphylococcus aureus -in the production of antiotide(s) and proteins derived from computer readable medium and used

Rosen CA;

Fannon MR,

of the invention. The DNA sequences are recorded on a computer readable medium, preferably selected from a floppy or hard disk, random access memory (RAM), read-only memory (ROM) or CD-ROM, Homology searches using the S.aureus DNA sequences allows putative functions to be assigned so that protein-encoding or regulatory regions of commercial, therapeutic or industrial importance can be obtained. Specifically, sequences which are likely to encode antigens have been identified and these polypeptides can be used in a vaccine composition against S.aureus infection. The be used in a vaccine composition against S.aureus infection of S.aureus in a sample. S.aureus is implicated in numerous human diseases, including cellulitis, eyelid infections, food poisoning, osteomyalitis, skin and surgical wound infections, scalded skin syndrome, toxic shock syndrome, etc. Organisms transformed with the DNA sequences can be used for recombinant production of the polypeptides. The new DNA sequences can be used their fragments) are useful as primers or probes for isolating any of the S.aureus DNA sequences contained on the computer sequence represents one of 5191 Staphylococcus aureus DNA sequences readable medium homologues

Also described are: (1) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and folyclonal antisers or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection comprising the sequences of (I), are useful in the detection of immunogens owniting the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they TGTGAACGATACGACAAAAGATTGGTTTGTAAAAGCAGCCGTATCTCAAGAATATGCAGA 740 AAACTITACGAATCITICTIATCCAATGGGTTTCCATTCTAAATACGAAAATTTTGTTGA <u>agaaaagcaaggaaagcaagaaaaaaaaaagrggaragcagrargaaggargargrcar</u> 621 AAACCCAGAAGATTGGATTGAAGGAGCAGCGGTAGCAGCTAAACAAGATTATCCTGGCGT Plasmodium falciparum chromosome 2 related DNA sequence SEQ ID NO:285. are rifins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistence in P. falciparum. Sequencing of the Plasmodium chromosome 2 and the subsequent identification of proteins encoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence to fralatia in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA70078 to AAA7027 and AAB18352 represent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the
                                                                                                                                                                                                                                                                                                                                                                                                                 5042 Ataatattititiatgataatcatgataccaataataataataataataataataa 5101

The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and polyclonal antisera or a monoclonal antibody raised to infection. (I) and polyclonal antisera or a monoclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rifins or secreted or membrane proteins) can aid the identification of infection with P. falciparum infection, or they can be used to identify drug resistance in P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the concess hampered by the complexity of the parasite iffection of proteins concoded by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasite resistance of malaria in many parts of the world, and these ls a pressing need for vaccines and new drugs. AAA70039 and AAB18144 to AAB18352 represent nucleotide and protein sequences given in the present conversed to many interpretation, but which are not specifically mentioned within the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    2730 TAAGACAATGGAAAATAAACCGAACTTAACAAATAAAATTATGAATAATGACAATAT 2789

                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                               The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to illustrate the invention.

A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of

The invention relates to novel genes and encoded proteins from Staphylococcus aureus. A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a patient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antiblotics. This sequence represents one of the novel S. aureus genes of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           403 GOTCAAGCATACCAAAATCAAGATATGCAGCAAGCATTCTTCTACTTAGGATTATCGCTT 462

The invention relates to methods of identifying an agent that binds a polypeptide from Staphylococcus aureus by contacting a polypeptide and an agent to form a mixture and determining whether the agent binds the polypeptide. The method is useful in identifying agents that bind gene products critical for the survival of microbes, preferably staphylococcus microbes, including agents that interfere with the function of such groducts. The method is used to identify new agents useful for treating products. The method is used to identify new agents useful for treating or preventing bacterial infections, particularly those caused by antibiotic-resistant bacteria. This sequence represents the coding region for a protein from Staphylococcus aureus of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying an agent that binds a polypeptide and useful for treating or preventing staphylococcal infections, comprises contacting a polypeptide and an agent to form a mixture and determining whether the agent binds the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          403 GGTCAAGCATACCAAAATCAAGATATGCAGCAAGCATTCTTCTACTTAGGATTATCGCTT

The invention discloses a method for identifying an agent that binds a polypeptide which comprises mixing a polypeptide and an agent to form a mixture and determining whether the agent binds the polypeptide. Also claimed is a method for identifying an agent that decreases the growth rate of a microbe, making a Staphylococcus aureus with reduced virulence, which comprises altering a coding sequence in an S. aureus to introduce a mutation, a vaccine composition comprising the S. aureus or introduce a mutation, a vaccine composition comprising the S. aureus to introduce a caucaction, a vaccine composition comprising the S. aureus or answer that reduced virulence. The methods are useful for identifying an agent that reduced virulence. The methods are useful for identifying an agent that infections, particularly those caused by antibiotic-resistant bacterial, infections, particularly bacteraemia, septic shock and serious metastatic infections wirtually any organ, skin rashes, food poisoning or multisystem dysfunction, i.e. toxic shock syndrome. The inventive method identifies agents that are unrelated to existing antimicrobials and that target different aspects of staphylococcal invasion of and replication in the host. The sequence presented is a DNA sequence encoding one of the S. aureus polypeptides of the invention.
                                                                                                                                                      Binding agent, growth rate; microbe; virulence; vaccine; bacterial infection; antibiotic-resistant bacteria; bacteraemia; becterial septic shock; metastatic infection; endocarditis; arthritis; osteomyelitis; pneumonia; abscess; skin rash; food poisoning; multisystem dysfunction; toxic shock syndrome; antimicrobial; antibacterial; immunosuppressive; cytostatic; antiinflammatory; gene; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identification of agent that binds polypeptide, for treating bacterial infections, particularly caused by antiblotic-resistant bacteria, involves mixing polypeptide and agent, and determining whether agent binds polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   5.1%; Score 43.2; DB 9; Length 837; 50.5%; Pred. ```
aureus comprising one of the seventeen nucleotide sequences fully disclosed in the specification. The invention is used to find agents that bind gene products critical for the survival of microbes, particularly Staphylococcus aureus and are therefore useful to treat bacterial infections particularly those caused by antibiotic-resistant bacteria. This is the polynucleotide sequence of an unknown coding region from the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              462

The present invention describes proteins and their fragments (I) encoded by chromosome 2 of the human malarial parasite, Plasmodium falciparum. Also described are: (I) nucleotide sequences (II) encoding (I); and (2) vaccines against P. falciparum infection comprising (I) or (II). (I) and (II) and polyclonal antibody raised to infection. (I) and polyclonal antibody raised to immunogens comprising the sequences of (I), are useful in the detection of infection with P. falciparum. Furthermore, (I) (especially when they are rishins or secreted or membrane proteins) can aid the identification of drugs to treat or prevent P. falciparum infection, or they can be used to identify drug resistance in P. falciparum. Sequencing of the condend by it will help to expand our understanding of parasite biology, a process hampered by the complexity of the parasitic lifecycle, and provide new targets for vaccine and drug development. Parasite resistance to drugs and mosquito resistance to insecticides have led to a resurgence of malaria in many parts of the world, and there is a pressing need for vaccines and new drugs. AAA7078 to AAA70287 and AAB18144 to AAB18352 cepresent nucleotide and protein sequences given in the present invention, but which are not specifically mentioned within the

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 199

Patent No. 6159469
GENERAL INFORMATION:
APPLICANT: Choi et. al.
TITLE OF INVENTION: Streptococcus pneumoniae Antigens and Vaccines
NUMBER OF SEQUENCES: 452
CORRESPONDENCE ADDRESS:
ADDRESSEE: Human Genome Sciences, Inc.
                                                                                                                                          Sequence 1, Application US/09790988

Patent No. 6632935

GENERAL INFORMATION:

APPLICANT: SHIGKNBU, SHUJI

APPLICANT: HATTORI, MASAHIRA

APPLICANT: HATTORI, MASAHIRA

APPLICANT: SAKAKI, YOSHIYUKI

ITILE OF INVENTION GENORE DNA OF BACTERIAL SYMBIONT OF APHIDS

FILE REFERENCE: 081356/0159

CURRENT APPLICATION NUMBER: US/09/790, 988

CURRENT FILING DATE: 2001-02-23

PRIOR PILING DATE: 2000-04-07

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ò
                                                                                                                                                                                                                                                                                                                                                                                                            primer and reverse transcriptase in the presence of 5-methyl dCTP. After second strand synthesis, uneven termini were treated with Pét DNA polymerase and EcoRI adaptors ligated to the blunt ends. The sample was cleaved with XhoI and separated on a Sephacryl S-500 column. Size-fractionated cDNA was precipitated and ligated to HybrizAP arms directionally using EcoRI-XhoI cleaved arms. After packaging, the phagemid vector (pAD-CAL4) was excised from the HybrizAP vector and plasmid DNA

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutory Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCL-98 and was constructed by partial Ecost digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; cn bw 8p, the same strain used for the BDGP's and how to order individual BAC clones, the entire library or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

termini were treated with Pfu DNA polymerase and EcoRI adaptors ligated to the blunt ends. The sample was cleaved with XhoI and separated on a Sephacryl S-500 column. Size-fractionated cDNA was precipitated and ligated to HybrizApP arms directionally using EcoRI-XhoI cleaved arms. After packaging, the phagemid vector (pAD-CAL4) was excised from the HybriZAP vector and plasmid DNA

- Determination of this BAC-one gequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
